

# Check Printing

Eliminate wait times and manual errors with automated payout check printing.

## WHY IT MATTERS

### Traditional Check Printing is Slow and Prone to Errors

Cashiers manually verify win amounts in the CMS, draft checks by hand, and wait for managers to physically sign before issuing payment.

When mistakes occur, players must be contacted to correct the payout, and audit teams spend valuable time adjusting and re-entering transaction amounts. The result is longer wait times for winners and unnecessary work for your team.

Check Printing replaces this manual process with fast, accurate automation.

## HOW IT WORKS

### A Faster Way to Pay Winners

Check Printing automates the process of issuing payout checks for jackpots and other high-value wins.

Designed for cage operations, the module automatically pulls win amounts and player data from your CMS to generate accurate checks ready for issuance. Managers and control personnel can review and authorize checks electronically, eliminating manual drafting, reducing player wait times, and preventing payment errors.

**The result:** faster payouts, happier players, and full reconciliation.

# What's Included

**Automated Check Generation:** Pulls player data and win amounts directly from CMS to create accurate checks with no manual entry.

**Dual Verification:** Built-in authorizer and verifier approvals ensure proper controls before check issuance.

**Audit-Ready Reporting:** Check Log and Positive Pay reports provide a complete transaction history for reconciliation and compliance. The Checks Issued Audit allows teams to verify generated checks against recorded payout transactions.

# Proven Impact

Casinos using Check Printing have:

- ✓ Reduced the time it takes to pay winners
- ✓ Minimized the reconciliation burden on cage and audit teams
- ✓ Automatically accounted for tax-withheld amounts through the CMS platform, saving cage team labor hours
- ✓ Streamlined accounting reconciliation through automated Positive Pay\* upload

\*Positive Pay is a bank fraud prevention service that cross-references checks presented for payment against a daily file of issued check numbers, automatically flagging any discrepancy before a payment is processed.

# Key Benefits

**Eliminate Manual Errors:** Remove re-keying mistakes that lead to incorrect payment amounts, player disputes, and costly reconciliation.

**Reduce Player Wait Times:** Generate payout checks instantly and enable remote approvals, so winners get paid in minutes, not hours.

**Strengthen Controls:** Dual verification and automatic "VOID" watermarking after printing reinforce accountability and audit defensibility.

**Save Audit Time:** Automated check tracking removes manual reconciliation, so audit teams can focus on higher-value work.

**Prevent Fraud:** Positive Pay\* reporting integrates with your bank to validate issued checks and reduce fraud risk.

## Generate. Approve. Pay.
